1. INTRODUCTION

This is a report on the Data Engineering project by group 19, for the Data Engineering course in the Degree in Artificial Intelligence of the UAB. We will be working with the Spotify Tracks Dataset, and attempting to build from it a . . .

2. THE DATASET AND EDA

We will be using a Kaggle dataset which contains 114 thousand tracks over a range of 125 different genres. Each track has some audio features associated with it, for example: artist, duration_ms or tempo.

From the Kaggle page we can already obtain some valuable information on the data. For starters, the storage system
